## HANDS FREE: THE CONVENIENT, SAFE SYSTEM THAT HELPS YOU WORK BETTER

Hands Free is the system devised by La San Marco for portafilter self-support inside the doser-grinder casing, leaving the operator's hands free during the coffee-grinding stage. The Hands Free system is optional on INSTANT (on-demand grinding) models, and a standard feature on La San Marco SMART INSTANT doser-grinders (on-demand grinding with automatic detection of 1 - or 2 - spout portafilters). The portafilter upper support is made of high-friction-coefficient rubber, holding the portafilter in place within the casing during the grinding stage. Hands Free by La San Marco comes with a portafilter release tension adjustment system; adjustment is quickly and accurately performed by calibrating the compressive force of two springs using easily accessible adjusting screws.
